Reasons for Allowance

1.

Claims 1-34, 41 and 42 are allowed in that in view of the claims now amended, control data or commands are received and responses to the host processor are transmitted via the second interface without interfering the format of raw image data to enhance image data.. As a result, the addressing and control functions are separate, so as to not utilize the time on the apparatus that could be use to transfer actual data.

Claims 1-18, 41 and 42 are allowed for the reason the prior art does not teach or suggest in claimed combination, "... the second interface coupled to said host processing system adapted for receiving said commands, the first interface and the second interface being independent of each other...."

Claims 19-26 are allowed for the reason the prior art does not teach or suggest, "... a processor bus section having an image processor, a processor bus interface adapted to be coupled to said host processing system to communicate print processing instructions between said image processor and said host processing system, the processor bus interface being independent of the image bus interface, the processor bus interface and the image bus interface operating in parallel..."

Art Unit: 2626

Claims 27-34 are allowed for the reason the prior art does not teach or suggest in claimed combination, "... communicating print processing instructions, through a processor bus interface coupled to said host processing system, to an image processor, the processor bus interface being independent of the image bus interface, the processor bus interface and the image bus interface connected in parallel to the host processing system..."
